IoT Project Presentation

Alexa/Google Home app controlled LED Strip

Group - 16

Aryan Jain - 19114012

Pragya Dalal - 19114063

Problem Statement

- Control an addressable LED Strip using Alexa/ Google Home App
 - Turn ON/OFF the LEDs
 - Change the Brightness
 - Change the Color of LEDs

Devices Used and Circuit Diagram

Devices Used

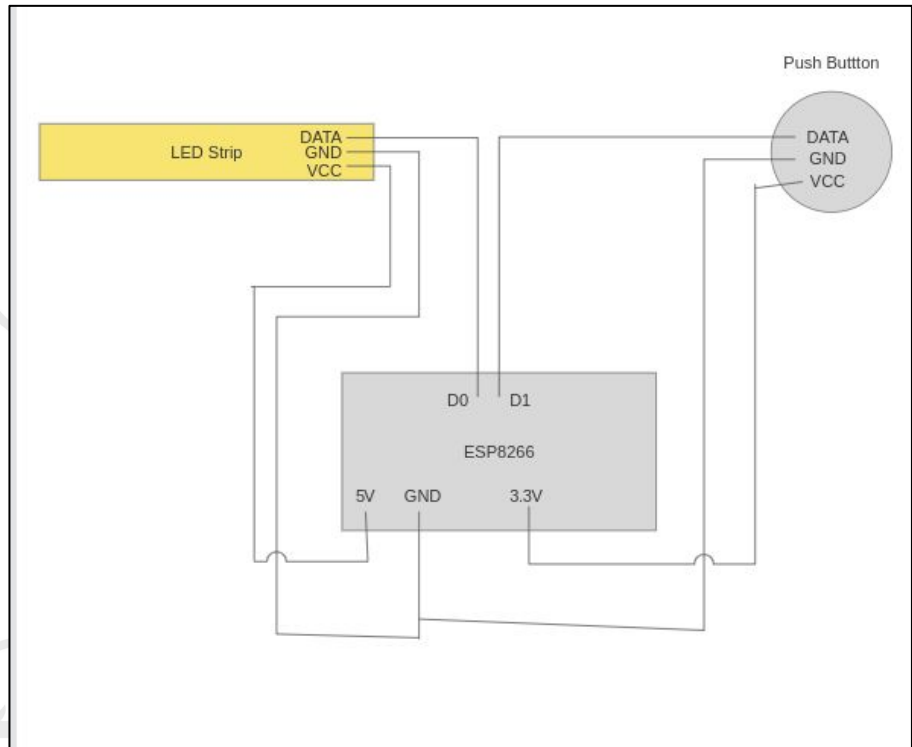

ESP8266 Board

Addressable LED Strip(WS2812B)

Push Button

Female Jumper Wires

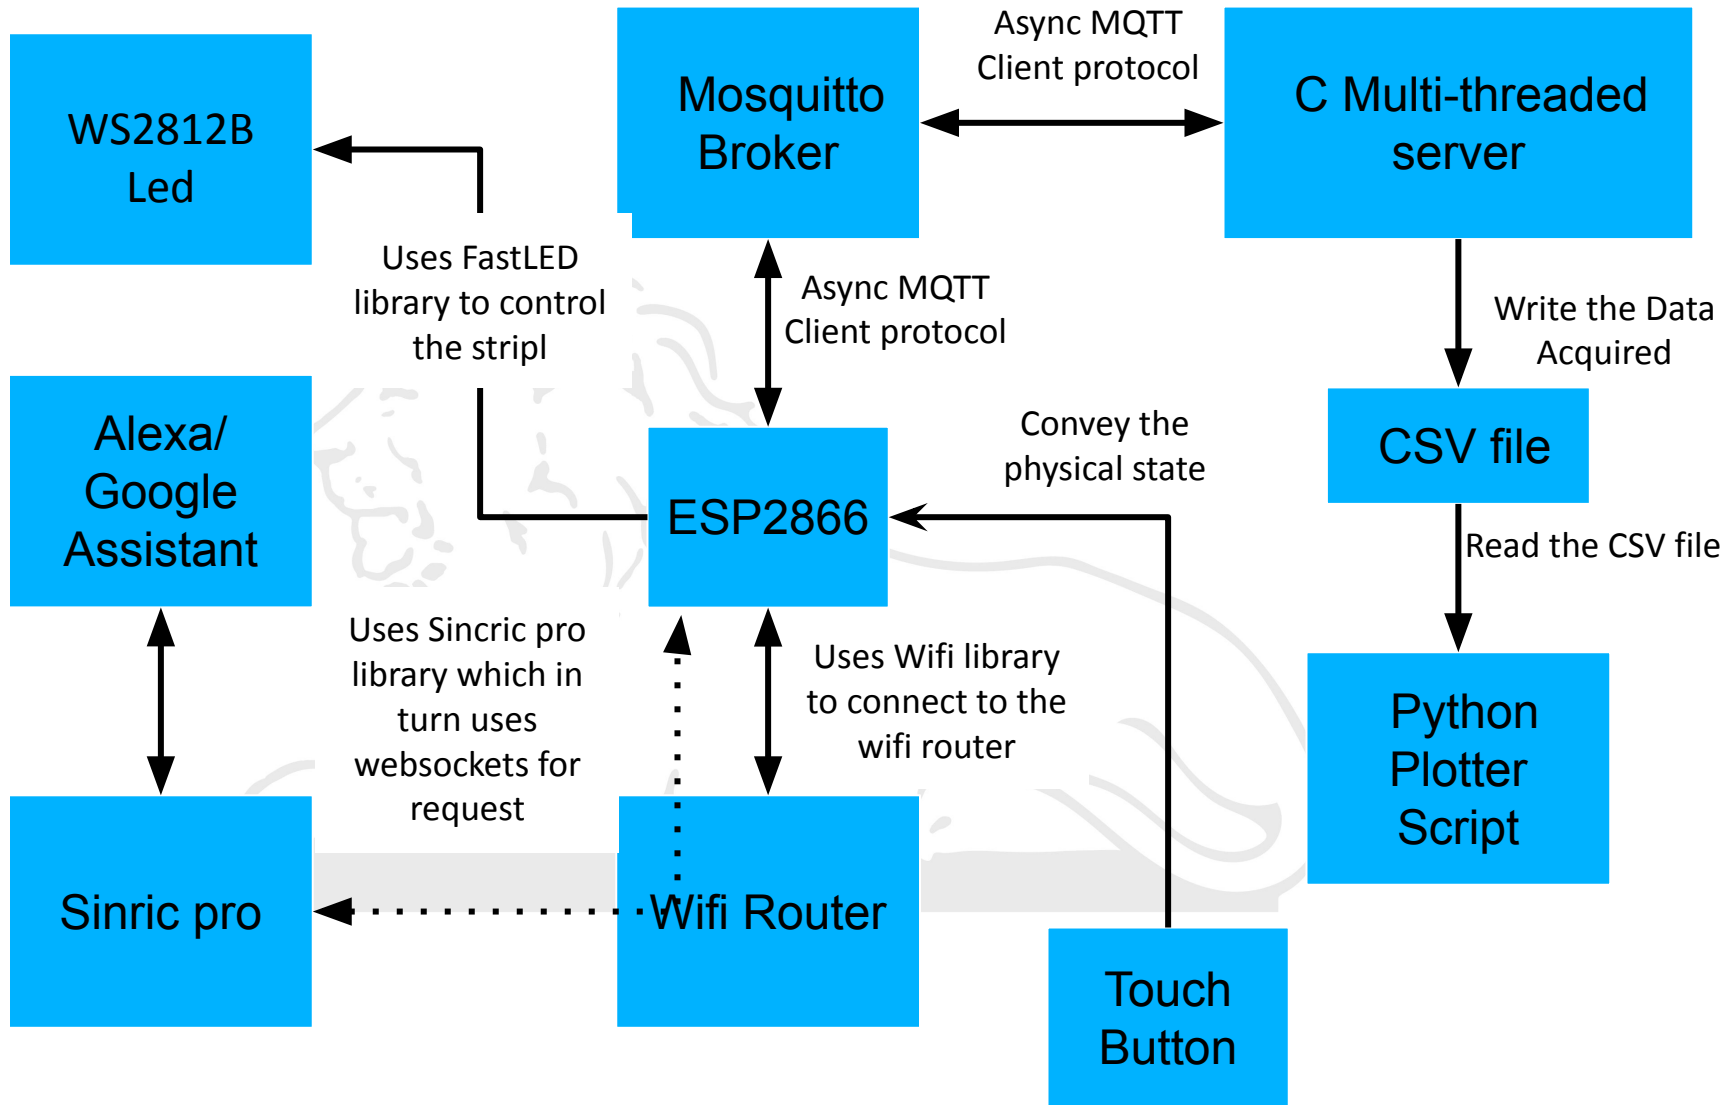

Circuit Diagram

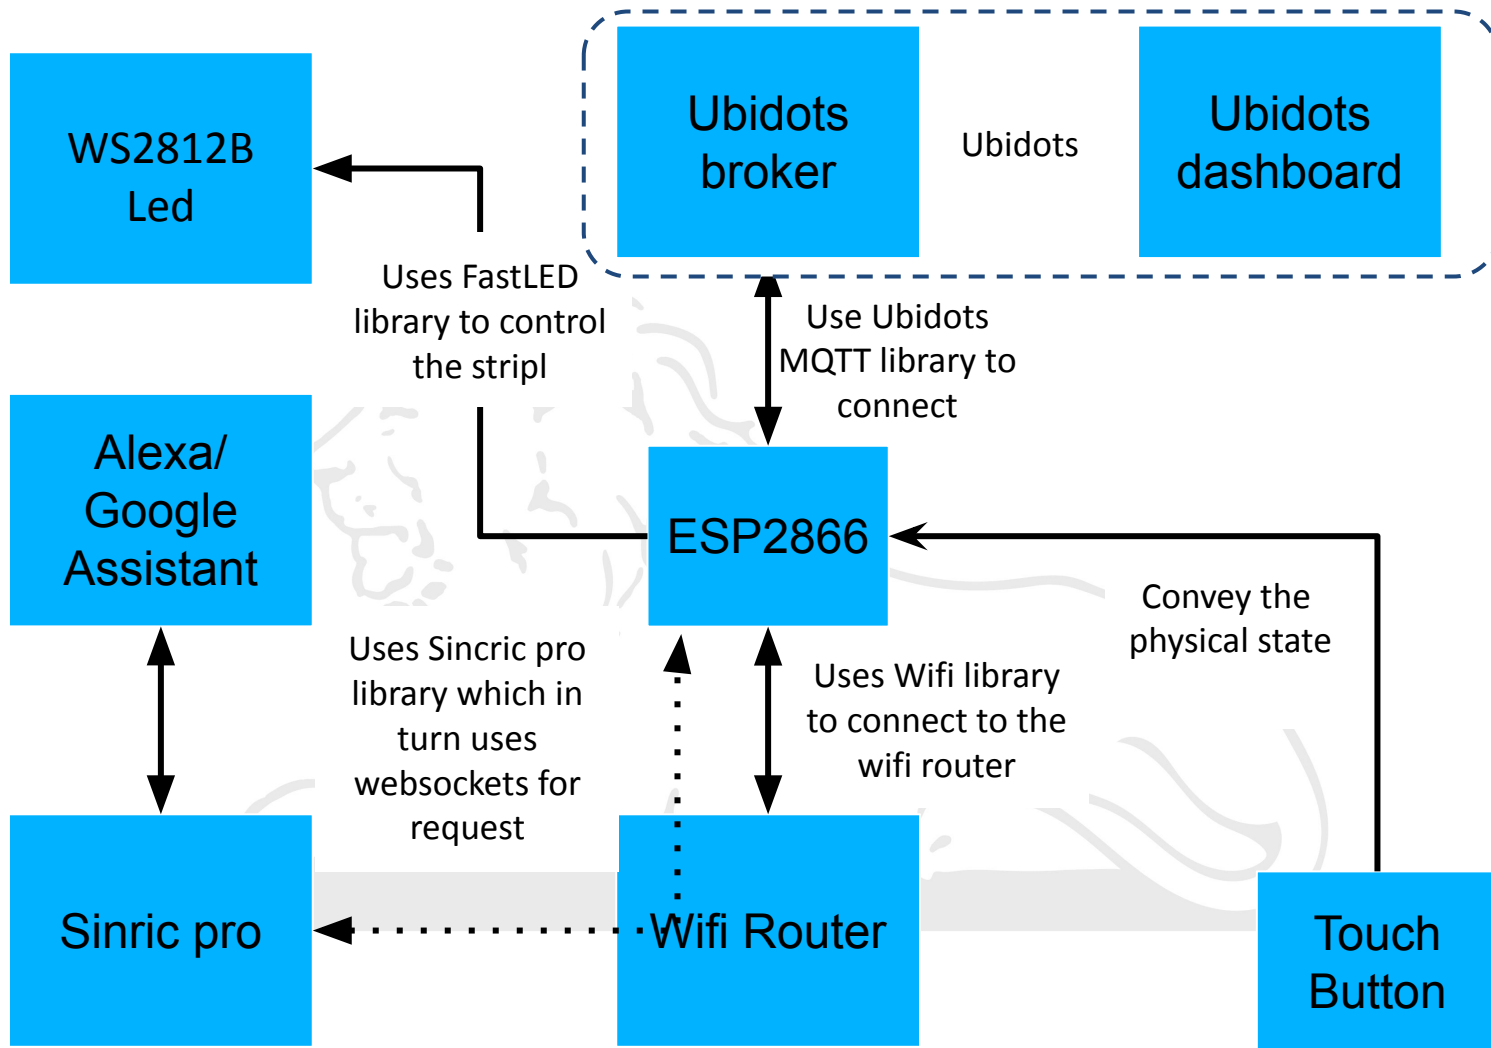

Functionalities Offered

- Controlling LED Strip using Alexa/ Google Home app using Sinric Pro Library
- Multiple Light modes available for Alexa app
 - created Custom Device template using Sinric Pro library
 - user can change from Normal to *blinking* Party mode in seconds.
- OTA functionality added to allow user to upload a new sketch using wifi
 - done using AsyncElegantOTA as well as ArduinoOTA library
- **PowerSaver** Option available
 - If turned ON, it keeps reducing the brightness by 50% for every inactive interval of 60 seconds.
- Data Analysis using Ubidots integration
 - these plots can be used to analyse the usage of the LEDs
